

Section 6.1	Name: <u>Notes</u>
<i>Classifying Quadrilaterals</i>	Date: _____ Period: _____
Essential Question	How can I classify and define parallelogram, rhombus, rectangle, square, kite, trapezoid and isosceles trapezoid?
Parallelogram	A quadrilateral with opposite sides that are parallel and of equal length 
Rectangle	A parallelogram with two pairs of equal sides and four right angles 
Rhombus <i>Diamond</i>	A <u>parallelogram</u> with <u>four equal sides</u> 
Square	A parallelogram with four equal sides and four right angles 
Kite	A quadrilateral with two pairs of equal adjacent sides and no equal opposite sides 
Trapezoid	A quadrilateral with exactly one pair of parallel sides 
Isosceles Trapezoid	A trapezoid whose nonparallel opposite sides are equal 
Irregular Quadrilateral	Quadrilateral with no equal sides and no equal angles—Just called quadrilateral
