

Who Has the Stars?

Utah, New Mexico, Colorado, and Arizona are sometimes referred to as the four-corners states because they have one common spot where their borders meet. In this strategy the borders of the four states overlap. Fill in each blank with the correct name of the state. Place a circle around the corner of each state that serves as the common spot where the four states meet.

How Many Stars Are There

- ___ 1. in Colorado but not in New Mexico, Utah, or Arizona?
- ___ 2. common to Utah and Colorado but not in Arizona?
- ___ 3. common to New Mexico and Arizona but not in Colorado?
- ___ 4. common to Arizona and Colorado and New Mexico?
- ___ 5. common to Colorado and New Mexico but not in Utah?
- ___ 6. common to Arizona, New Mexico, and Utah but not in Colorado?
- ___ 7. common to New Mexico, Colorado, and Utah but not in Arizona?
- ___ 8. common to Arizona, Utah, and Colorado but not in New Mexico?
- ___ 9. common to Arizona and New Mexico but not in Utah?
- ___ 10. common to all four figures?
